

Fitness count-helper

This project created by:

Ely Fawaz
Mostafa Zoebi
Leena Ghamrawi

What is it used for?

A small box that help in such workouts with no worries about counting such as:

- **Push-ups**
- **Squats**
- **Sit-ups**

**In hope to add more and more types
in the future**

What do we need:

1

**Arduino-uno
and battery**

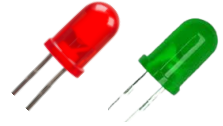

2

Ultrasonic-sensor

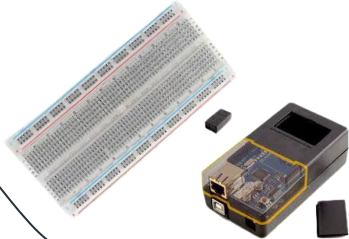

3

Green and red Led

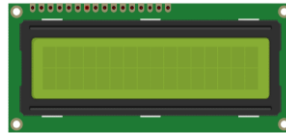

4

**Bread-board
and box**

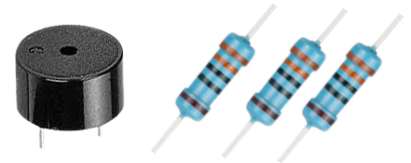

5

Lcd

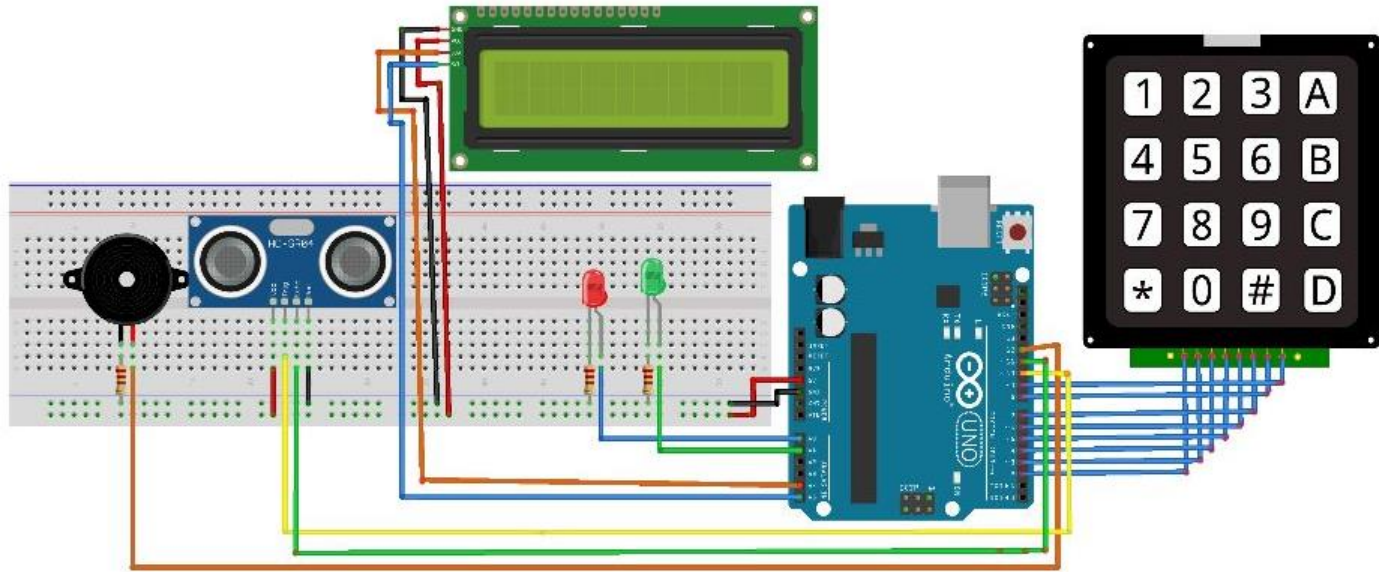

6

**Piezo-buzzer and
resistor**

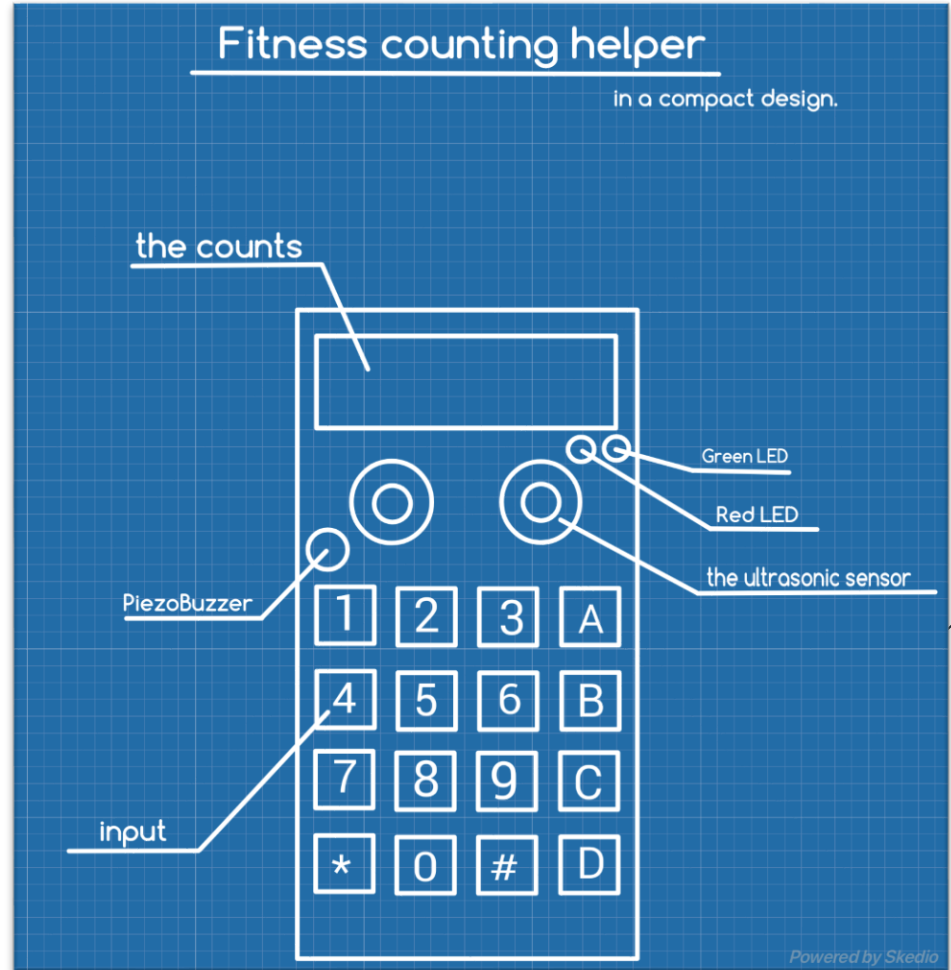

Connections:

The blueprint

All the components will be in a box in a compressed design ,so it can be easy to use.

- The red led implies the power.
- The green one will blink after every count which will be followed by a sound from the buzzer.
- The sensor will identify the counts.
- And the lcd will show the count number.

Tutorial:

Thanks Dot!
